Experience

Meta **Menlo Park, CA**

Software Engineer – WhatsApp Payments *July 2025 – May 2026*

- Shipped payment features for **WhatsApp Payments**, a messaging-integrated platform serving **hundreds of millions of users**, spanning consumer payment flows, reliability, and infrastructure.
- Built a **transaction-limit recovery flow** that recovered **11M+ stalled payment sessions** and drove **∼9.8K additional transactions/day**, adding capped-amount, alternate-account, and retry paths for users blocked at checkout (A/B-validated).
- Restored payment-error visibility for **∼70M users** (**∼1,900×** more captured errors) by root-causing a telemetry gap traced to two misconfigured feature flags, then hardened crash-prone code and resolved production incidents same-day.
- Delivered end-to-end features (peer-to-peer payment reminders as sole engineer, in-chat payment-text parsing, cross-device account recovery with retry and staleness handling) and migrated **12+ payment operations** onto a **GraphQL** service layer with per-operation gating and mock-backed tests.
- Partnered with **product managers**, **designers**, **data scientists**, and **data engineers** on experiment design, metric instrumentation, and dashboards.

Verizon **Basking Ridge, NJ**

Machine Learning Engineer Intern *Jun 2024 – Aug 2024*

- Architected a **real-time network optimization platform** handling **10TB+ daily** from **100K+ cell towers** via **Kafka**, **Spark**, and **AWS**.
- Developed and deployed an ensemble of **ML models** (Random Forest, XGBoost, DNN) on **Kubernetes**, boosting coverage predictions by **28%**.
- Built scalable **ETL pipelines** with **Airflow**, integrating IoT-sensor, user-metric, and geospatial data for downstream analysis.
- Implemented a custom **AutoML** solution with **Ray** and **MLflow** automating model selection and hyperparameter tuning, cutting development time by **40%**.

Visa Inc. **Austin, TX**

Software Engineer Intern *May 2022 – Aug 2022*

- Engineered a **full-stack web app** tracking 150+ applications and their dependencies, centralizing operational data to improve DevOps efficiency.
- Built a **RESTful API** with **Java**, **Spring Boot**, and **Groovy** plus responsive **React/Redux** components for real-time, end-to-end data flow.
- Wrote unit tests reaching **90%+ coverage**, reducing regressions and improving maintainability across the codebase.

Skills

Languages: Swift, Objective-C, Python, Java, Erlang, JavaScript, TypeScript, SQL, C++, Bash

Technologies: UIKit, GraphQL, Protobuf, Buck2, Kafka, Spark, AWS, Kubernetes, Docker, Spring Boot, React, Node.js, PostgreSQL, Redis

Concepts: Mobile Engineering, Distributed Systems, System Design, REST APIs, Concurrency, A/B Testing, Observability, CI/CD

AI Tooling: Claude Code, Codex, prompt engineering

Education

University of Houston **Houston, TX**

*Bachelor of Science in **Computer Science**; GPA: **3.90/4.0*** *May 2025*

Projects & Leadership

Astra Medical — Astramedical.co **Remote**

Lead Developer *Sept 2023 – Dec 2025*

- Built an **AI-driven medical billing tool** that cut claim processing from **14 days to under 10 minutes** using **NLP** and **ML**.
- Automated **ICD-10/CPT** code assignment, cutting denials by **30%** and successfully appealing **50%** of rejected claims.

TeleShadowing — Teleshadowing.com **Remote**

Director of Technology *Apr 2021 – Dec 2025*

- Led technical operations for a non-profit providing remote shadowing to **5,000+** prospective medical students nationwide.
